South India

Dear Dr. Narayanan:

I am sorry that my acknowledgement of your two letters of April 7 and May 9 was delayed so long. In the meantime, you have received your appointment at the University of Kansas for the academic year 1965/66 which has settled the problem of your employment until I can take over.

I can offer you the position of a Research Associate on my NIH grant, beginning September 15, 1966. This grant terminates on December 31, 1967, and I can guarantee your employment only up to that date. However, I am planning to apply for a renewal of this grant, and I am confident that my support by NIH will be continued, if our experimental work is successful.

I am looking forward to our collaboration, and I hope that you will have a fruitful year in Kansas. Dr. Eleanor Wenger has probably told you of our present experiments which show clearly that the motility in the chick embryo is generated in the motor system.

With my best regards,

Sincerely,

Viktor Hamburger
